1. Subject Reference: Parameters and Applicability — GR25. In-Game Applicability

Subject Reference: Parameters and Applicability — GR25. In-Game Applicability

ID	Attribute	Value, conditions and result
GR25-01	Compared claim	Claim under examination: a history of past floors or a modified APK guarantees the next win. This is an analytical thesis, not a quotation attributed to anyone.
GR25-02	Object of the claim being tested	The server-side outcome of the original Tower Rush; the animation image and the cash withdrawal are different objects.
GR25-03	Data available before the bet	Before the bet, the rules, the current balance and the past history are available; the future server-side outcome cannot be read from these.
GR25-04	Data available after settlement	After settlement, the result and history are available; cryptographic verification uses the exact revealed inputs of the specific version.
GR25-05	Boundary between client-side and server-side action	The client sends Build/Cashout and displays the response; replacing the image does not create a server-side credit or an external bank transfer.
GR25-06	Indicator of product mismatch	A different studio, the 2 suffix, a different game ID or an unknown APK publisher distinguish products; a similar cover alone does not prove fraud.
GR25-07	Model of selecting successful demonstrations	Explanatory selection model: the audience splits into two branches with opposite predictions; the unsuccessful branches are hidden.
GR25-08	Number of remaining branches or recipients	With 2 048 recipients and 11 binary splits, 2048/2^11=1 remaining branch; selecting successful displays is not a prediction.
